

# JOURNAL OF LOW TEMPERATURE PHYSICS

Volume 61, 1985

*Journal of Low Temperature Physics* is an international medium for the publication of original papers on fundamental theoretical and experimental research in low temperature physics. Typical subject areas are:

Properties of Fermi and Bose systems, especially in the condensed phases, and of the hydrogen and helium isotopes;

Superfluidity and the properties of quantum fluids and solids;

Properties of isotopic mixtures at low temperatures;

Superconductivity;

Phase transitions at low temperatures;

Thermal properties, thermodynamics, and statistical mechanics of low temperature phenomena;

Lattice dynamics, phonon phenomena, acoustic, mechanical, and optical properties of substances at low temperatures;

Electronic properties of metals, semiconductors, and alloys including Fermi surfaces, oscillatory phenomena, magnetoelectrical effects, acoustic properties, and transport phenomena at low temperatures;

Magnetism at low temperatures including paramagnetic, ferromagnetic, and antiferromagnetic properties and including the behaviour of dilute alloys and nuclear spin systems;

Surface phenomena at low temperatures.

asionally review articles will be included. No papers solely of a technical or applied nature will be accepted.

**EDITORS:** John G. Daunt and John P. Harrison  
Physics Department, Queen's University  
Kingston, Ontario, Canada K7L 3N6
